Cancer is a leading cause of morbidity and mortality in organ transplant recipients. The risk of developing cancer after transplantation is increased compared to the general population, due to several factors, including immunosuppression, which is necessary to prevent rejection of the transplanted organ. Cancer in organ transplant recipients is often more aggressive and difficult to treat, due to the immunosuppressed state of the patient.

Cancer in Organ Transplant Recipients: A Comprehensive Guide is a comprehensive reference that provides essential information about the risks and management of cancer after organ transplantation. With chapters written by leading experts in the field, this authoritative reference offers comprehensive insights into the latest advances and best practices for managing cancer in this vulnerable population.

Key Features:

- Provides a comprehensive overview of the epidemiology, risk factors, and mechanisms of carcinogenesis in organ transplant recipients
- Discusses the screening, diagnosis, and management of specific types of cancer in organ transplant recipients, including solid tumors and hematologic malignancies
- Covers the unique challenges of managing cancer in immunosuppressed patients, including the impact of immunosuppressive therapy on cancer development and treatment
- Explores the latest advances in cancer prevention, early detection, and treatment for organ transplant recipients

Cancer in Organ Transplant Recipients: A Comprehensive Guide is an essential resource for transplant physicians, oncologists, and other healthcare providers who care for organ transplant recipients. This authoritative reference provides the latest information on the diagnosis, management, and prevention of cancer in this vulnerable population.

About the Editors

Editor 1 is a leading expert in the field of organ transplantation and cancer. He is the author of numerous publications on the topic and has served as the principal investigator on several clinical trials related to cancer in organ transplant recipients.

Editor 2 is a renowned oncologist who specializes in the treatment of cancer in organ transplant recipients. She is the author of several textbooks on the topic and has served as the principal investigator on several clinical trials related to cancer in organ transplant recipients.

Table of Contents

- Epidemiology, Risk Factors, and Mechanisms of Carcinogenesis in Organ Transplant Recipients
- Screening, Diagnosis, and Management of Solid Tumors in Organ Transplant Recipients
- Screening, Diagnosis, and Management of Hematologic Malignancies in Organ Transplant Recipients
- The Impact of Immunosuppressive Therapy on Cancer Development and Treatment
- Advances in Cancer Prevention, Early Detection, and Treatment for Organ Transplant Recipients
