## Understanding Mouth Ulcers

Mouth ulcers, also known as canker sores or cold sores, are small, painful lesions that can develop on the lips, gums, tongue, or inside the cheeks. They are caused by a variety of factors, including stress, hormonal imbalances, nutritional deficiencies, and certain medical conditions.

Mouth ulcers can range in size from a few millimeters to several centimeters and are typically round or oval in shape. They can be white, yellow, or red in color and may be surrounded by a red halo.

### **Traditional Treatments: Ineffective and Incomplete**

Conventional treatments for mouth ulcers often provide temporary relief but fail to address the underlying causes. These treatments typically involve over-the-counter medications, such as pain relievers and mouthwashes, which only mask the symptoms rather than curing the condition.

In some cases, prescription medications may be prescribed, but these can come with a range of side effects and can be habit-forming.
