Albert Einstein was one of the greatest scientists of all time. His theories of relativity revolutionized our understanding of the universe, and his work has had a profound impact on our lives.

But what many people don't know is that Einstein was also a deeply curious and philosophical man. He was always asking questions about the world around him, and he was always looking for new ways to understand it.

One of the most famous stories about Einstein's curiosity is the story of his cook, Hermine.

Hermine was a simple woman, but she was also very intelligent. She loved to talk to Einstein about science, and she often asked him questions that stumped him.

One day, Hermine asked Einstein a question that he had never thought about before. She asked him, "If you could ask God one question, what would it be?"

Einstein was taken aback by the question. He had never thought about asking God a question before. But after a moment of thought, he said, "I would ask him, 'Why is the universe so incomprehensible?'"

Hermine's question had a profound impact on Einstein. It made him realize that there were still many mysteries in the universe, and that we were only beginning to understand it.

Einstein's question also led him to develop a new theory of gravity, which he called the general theory of relativity. This theory revolutionized our understanding of the universe, and it is still one of the most important theories in physics today.

What Einstein Told His Cook is a fascinating look at the life and work of Albert Einstein. It is a book that will inspire you to ask your own questions about the world around you, and to never stop seeking answers.

But Einstein's legacy is not just about his scientific discoveries. It is also about his curiosity, his passion for learning, and his desire to understand the world around him.

Einstein was a true visionary, and his work has inspired generations of scientists and thinkers. He is a reminder that we should never stop asking questions, and that we should always be looking for new ways to understand the world.
